**DINGLI**®  
*Exceed . New Height*

Zhejiang Dingli Machinery Co., Ltd. was founded in 2005. For a long time, we have been a leading manufacturer of intelligent aerial work platforms in the world. We have adopted the core concepts of "Carbon Peak" and "Carbon Neutral" into the entire process of corporate governance, including green travel for employees, green park construction, green manufacturing, green R&D of product, green recycling and remanufacturing, etc.

Relying on the intelligent factory with the highest degree of automation in the industry, we have fully realized collaborative manufacturing, green manufacturing and safe manufacturing.

Technological innovation is the core tenet of Dingli, and our goal is to minimize unnecessary waste of resources through technological iteration. We have R&D centers in Italy and Germany, an Enterprise Research Institute in China. We have been granted 259 patents, including 95 invention patents and 62 international patents. We have independently developed more than 200 types of aerial work platforms that are the most in the industry, all of which have passed authoritative certifications such as CE in Europe and ANSI in the US, and are exported to over 80 countries and regions worldwide.

Electrification is an important measure for the company to provide customers with energy-saving solutions, and we are the first in the industry to complete the electrification of our full range of products. By promoting the efficient use of recycled energy, we have established remanufacturing

plants to continuously provide customers with product life cycle services.

In order to better convey the concept of global green development, we have invested in MAGNI (Italy), MEC (USA) and TEUPEN (Germany), and we have successively established more than ten overseas subsidiaries with innovative technology and green products as the entry point, so that our electric aerial work platforms can serve global customers.

We are also committed to building an equal, diverse and inclusive corporate environment. We actively empower women to achieve gender diversity in all positions in the male-dominated machinery manufacturing industry; we respect different voices so that team building can maintain innovation and flexibility for a long time; We boost the development of the industry and create a new era of electrification of "non-road mobile machinery" to lead green transformation; we build a harmonious supply chain, connect upstream and downstream to create the world's only industrial park for aerial work platforms; We fulfill social responsibilities, establish the "HongDing Fund", and actively carry out warm-hearted volunteer service activities such as poverty relief, fundraising and disaster relief, etc.

"Green sustainability" is becoming the focus of Dingli's high-quality development through the entire life cycle of the company's ecology. In the future, the company will continue to deepen the green energy-saving strategy and contribute to the sustainable development of the common home.

## Modulaire giek serie

Omdat diesel-, elektrische en hybride modellen op hetzelfde platform ontwikkeld worden is 85% van de onderdelen in alle series hetzelfde. Er zijn "D"-, "M"- en "T"-series met werkhoogtes die variëren van 16 tot 44 meter, die allemaal geschikt zijn voor standaard containertransport.

### Modulaire giek D-serie

Onafhankelijk door Dingli ontwikkeld, met een maximale werkhoogte van 16 tot 22 meter, en een maximale belasting van 250 kg. De hele serie is lichtgewicht qua ontwerp en uitgerust met geïntegreerde assen. Dit heeft vele voordelen, zoals eenvoudig onderhoud, een hoog chassis, energiezuinig, stabiele besturing en eenvoudig transport.

### Modulaire giek M-serie

Gezamenlijk ontwikkeld door Dingli en MAGNI uit Italië, met een maximale werkhoogte van 22 tot 34 meter, en een maximale belasting van 454 kg. De hele serie bevat hele onderdelen aan de onderzijde en is uitgerust met geïntegreerde assen. Dit heeft vele voordelen, zoals een hoog laadvermogen, krachtig, eenvoudig onderhoud, een hoog chassis, energiezuinig, stabiele besturing en eenvoudig transport.

### Modulaire giek T-serie

Gezamenlijk ontwikkeld door Dingli en TEUPEN uit Duitsland, met een maximale werkhoogte van 36 tot 44 meter, en een maximale belasting van 454 kg. De hele serie is ontworpen met de gepatenteerde in-situ asuitbreiding. De giek kan in deze serie achterover gekanteld worden, waardoor het de enige in zijn klasse in de wereld is die past in het standaard containertransport. De bewegingsvrijheid van deze serie is 40% hoger dan anderen in zijn klasse, en het is de enige giek

### Reguliere giek
